

Shallow Mount Anti Ram Bollards

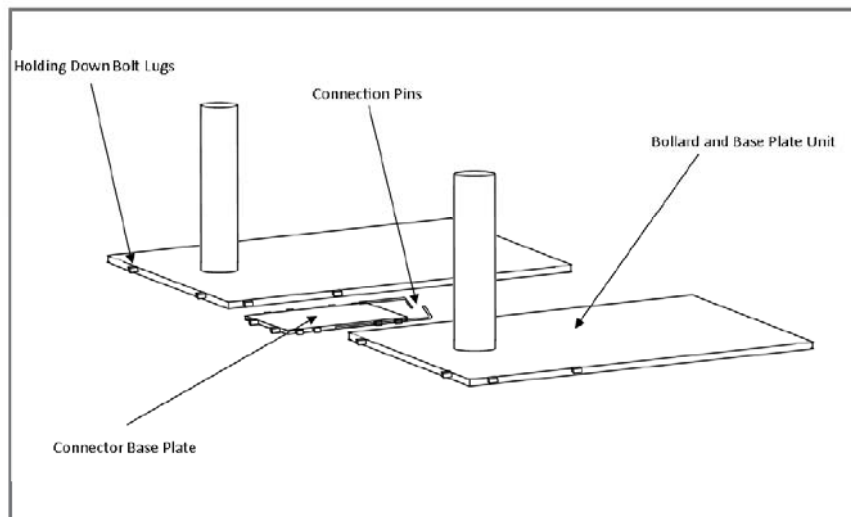

Our APS Shallow Mount bollards allow you to install a completely tested and certified anti ram barrier, whilst minimising the excavation requirements.

They are typically used outside city centre locations etc, where below ground services limit the depth of excavation that can be carried out, but which require full PAS68 levels of protection against attack by vehicles.

Multiple bollards may be linked together to form a continuous ram resistant barrier of any length.

Decorative sleeves can be supplied, to match most existing street furniture or design requirements.

Linking multiple bollards to form a continuous barrier.
