

Alligator Ramp

The Alligator Ramp combines traffic flow control and speed control in one product. Alligator Ramps are a modular steel speed ramp with inbuilt Alligator Teeth as a direction control device.

A 50mm wide tooth will safely deflate car and 4x4 tyres but is depressed when vehicles move in the approved direction. Large rubber buffers ensure quiet, smooth operation, and red cats' eyes provide night-time warning to vehicles moving against the approved traffic flow direction.

Ramp sections are 320mm wide by 690mm long and have a strong Durbar surface, finished in alternating black/ yellow. The system is rated for all wheeled vehicles including HGVs and is simple to install on asphalt or concrete using expanding anchor bolts. High quality components ensure that the Alligator Ramp provides a long-lasting low-maintenance vehicle control solution.

Suggested Quantities to Suit Varying Road Widths.

Road Width	Quantity of Ramp Sections
2.5m	7
3.0m	9
3.6m	10
4.0m	11
4.5m	13
5.0m	15
6.0m	17
7.0m	21
9.0m	27
